

Figure 1S. EI mass spectra for low-NO_x SOA products detected in the GC/MS TIC of Figure 10a. (a), (b), and (c) correspond to mass spectra of isomeric C₅ alkene triols. (d) and (e) correspond to mass spectra of diastereoisomeric 2-methyltetrol performate derivatives. (f) and (g) correspond to mass spectra of diastereoisomeric 2-methyltetrols.
